

Value Stream Mapping

Why VSM:

This Three day workshop develops the knowledge and skills for planning the deployment of Lean. This workshop introduces Value Stream Mapping to measure and define the process improvement opportunities. Workshop participants will analyze and document the current state value stream of one of your existing product families. They will then create future state value stream maps that identify and quantify the opportunities for improving process performance through the deployment of Lean Technologies. Ultimately, the workshop participants will produce project plans for achieving those improvements.

Who should attend?

This workshop is intended for those responsible for leading and managing the Lean Improvement projects that will follow. The training is team – based training. Each team should include the Process Owner, preferably a Lean Black Belt and one or two Project Team Members. Up to 3-4 teams can participate in each workshop.

VSM Benefits

- To develop understanding of the Lean improvement philosophy, process and tools.
- To develop knowledge and skills for creating current and future state value stream maps; and for each team to create a current state map, future state map and a Lean deployment plan for one of your product families.

Seminar Outline

- **Introduction to Lean**
- **Introduction to Value Stream Mapping**
- **Drawing Current State Maps**
- **Measuring the Current Performance –**
- **Process & Financial Data Collection**
- **Analyzing the current State using**
- **the Lean Planning Process**
- **Drawing Future State Maps**
- **Gap Analysis – Future State**
- **Versus Current State Performance**
- **Lean Project Planning**

- **Management Reports & Management**
- **Review of Project Plans**
